MAKE MONEY OUT OF THIN AIR !

The growth of air conditioning on new vehicles in the UK has been dramatic and the trend is forecast to continue. The development of air conditioning from a luxury option to a standard-fit has occurred very quickly and in an era of increased component durability, longer manufacturers' warranties and extended service intervals, air conditioning service and repair offers a much needed growth area.

Whether you currently work on newer or older vehicles, luxury or mass marques, it will only be a matter of time before the majority of cars you are working on have factory fitted air conditioning. With this in mind The Trade Group has introduced the Trademaster T9100 air conditioning machine.

Trademaster T9100 is a unit for air conditioning specialists and general garages.

It has all the functions and performance required for professional use with Automotive R134a air conditioning systems. The T9100 unit performs recovery, recycling and recharging of refrigerant automatically and guarantees a rapid and full dehydration of the air conditioning system. Moreover, an optional printer is available for a detailed activity report.

T9100

Trademaster T9100 Air Conditioning Unit

NATIONAL COVERAGE :: LOCAL SERVICE

FUNCTIONS

T9100 allows:

- Automatic recovery
- Automatic recycling
- Automatic oil discharge
- Vacuum phase programmable
- Automatic A/C system test
- Automatic refrigerant charging
- Automatic non condensable discharge
- Programmable maintenance
- Multi-language display
- Data transfer and database updating through Smart key

And much more...

BENEFITS

T9100 allows the restoration of air conditioning system efficiency and function on every vehicle.

T9100:

- Reduces air conditioning system maintenance times,
- Reduces the labour cost incurred due to waiting during the operation,
- Reduces the risks thanks to the precision and the accuracy of the operation,
- Guarantees full customer satisfaction,
- Gives greater returns for your work.

TECHNICAL FEATURES

Refrigerant:	R134a	Compressor:	¼ HP 300 grs/min
Vacuum pump:	70L/min 2.5CFM at 50Hz	Manometers:	Ø 80mm class 1
	84L/min 3CFM at 60Hz	Hose management:	244 cm / SAE-J2196
Maximum pressure:	18 bar	Power supply:	230V 50-60Hz
Operating temperature:	10 - 50 °C	Dimensions (cm):	55 x 52 x 95
Tank capacity:	8 Kg	Weight:	60 Kg (132.3 lbs)
Oil tank:	2 x 250 ml
